

A cleaner today for a better tomorrow

Chemical Deep Cleaning

With the advent of pandemic threatening diseases worldwide, businesses have become more aware of the necessity for effective cleaning processes in especially those areas that are known to harbour harmful bacteria such as washroom and toilet facilities. Bacteria will contaminate, cross-infect and multiply in alarming proportions if not treated in a systematic and effective manner. Bad odour is normally an indication of unsanitary conditions which can have a negative effect and create a bad impression.

As a result of its extensive experience in eliminating bacterial threats, Camperdown Health & Hygiene is uniquely equipped to address all problems that require chemical deep cleaning such as:

Toilets and urinals

We ensure descaling, removal of lime, uric acid and encrustations by applying solvents as required. Internal and external surfaces, seat hinges, door handles, gratings, seat covers, traps and fittings are cleaned. Disinfecting happens as a matter of course at all times. Floors and walls are thoroughly scrubbed and disinfected.

Washroom facilities

We thoroughly clean and disinfect wash basins, sinks, troughs, baths, taps and any other fitment. We clear overflows and remove accumulated waste deposits and redo silicon sealants where necessary. Floor and wall surfaces are scrubbed and disinfected. Tiled walls and shower floors receive special attention as the grouting in these areas often become the breeding ground for

Run-off pipes and waste traps

All pipes leading from facilities are chemically treated in order to remove accumulated deposits, thereby ensuring free flowing conditions. Waste traps are removed, where possible, and cleaned to prevent overflowing.

Blocked drains, broken equipment and fittings can be unblocked and repaired.

Camperdown Health & Hygiene liaises with clients to determine specific days and times on which chemical deep cleaning should be done. This ensures that the deep cleaning process does not interfere with the schedule of the companies' employees.

Our deep cleaning teams operate with supervisors who ensure that work of the highest possible quality is delivered.
